

Press Release

HEMEX announces new partnership with SMART-TRIAL

HEMEX is delighted to announce our exciting new partnership with SMART-TRIAL. Collecting and managing clinical data has been revolutionized for the MedTech industry and we are pleased that eCRF, eConsent, and more can now be done with confidence. This partnership enables us to provide healthcare start-ups with a complete range of packages to ensure conducting clinical trials, PMCF studies, and monitoring is made easy and affordable.

- Flexible CRO services available at HEMEX to support start-ups throughout clinical development.
- Affordable and compliant EDC platform which enables live data collection and excellent compliance.
- Free of charge HEMEX initial consultation guaranteeing that we can offer exactly what start-ups need to ensure their clinical development meets all regulatory requirements and enables swift product approval.

Basel, Switzerland, February 3, 2021 – HEMEX AG strongly believes in the importance of digitalizing data to enhance the way clinical trials are run. This makes monitoring possible from anywhere at any time, and ensures better patient engagement and compliance. Our collaboration with SMART-TRIAL enables us to offer start-ups digitalized solutions for their CRF, patient Consent, and many additional benefits to make data collection easy. Together, we can lead the way in pioneering Electronic Data Capture in clinical studies for the future.

The SMART-TRIAL platform offers 5 main products: eCRF, ePRO, Suite, Cases, and Survey. Each one comes with additional flexible add-ons, which ensures the platform can be tailored to specific study needs.

One value HEMEX and SMART-TRIAL both have in common is that we want to be able to support promising life science start-ups and accelerate their clinical development. HEMEX CRO offers tailored Functional Service Provision packages at each critical step of clinical development to help start-ups generate the accurate evidence needed for regulatory and commercial success. SMART-TRIAL has taken a similar initiative to support start-ups by setting up the Future Stars of MedTech Program. This enables start-ups to benefit from discounted prices, exclusive events, ready-to-use templates but most importantly, receive support from two companies that believe in and want to help them succeed.

«HEMEX recognises the challenges early-stage start-ups face in today's world, with more stringent regulations and the need to capture large amounts of data to get a product to the market. As a CRO, HEMEX also sees the benefits of digitalising trial data to facilitate monitoring in real-time, which is why we are extremely pleased about this partnership with SMART-TRIAL. Two companies with very similar ideologies working together is a powerful alliance, and I believe we can support many promising start-ups through clinical development and enable innovative products to reach the global market», said Pascal Winnen, CEO of HEMEX.

«A key element in SMART-TRIAL's vision is to empower clinical teams to be their best and in full control of their data. Many life science start-ups struggle with the increasing regulations connected to gathering clinical data, so we always focus on making our platform as easily accessible for start-ups as possible. This partnership with HEMEX will further enable us to do that. Their combination of experience with start-ups and wide service offerings is ideal and we are very happy to be part of it», said Páll Johannesson, CEO & Co-Founder of SMART-TRIAL.

We are proud to welcome the SMART-TRIAL team as our newest partner as we continue to grow and serve new Life Science businesses with the expertise and knowledge they need to succeed.

Get in touch with us today to find out more on our range of exciting new packages!
