## Sedimentum closes its next financing round of CHF 3.3 Mio.

*The management of Sedimentum (f.l.t.r.) Arthur Habicht, Sandro Cilurzo und Eugenie Nicoud*

**Only six months after closing its seed round of CHF 2.1 million, the successful healthtech start-up closes its pre-series A financing round of CHF 3.3 million. With this new capital, Sedimentum intends to conquer the Swiss B2C market with its intelligent SAFE-living solution.**

Most accidents occur at home, where falls are among the most common causes. Nevertheless, it is not only the fall itself that is dangerous, but also a potentially lengthy period passing until assistance is provided. Help arriving promptly can save lives. For this reason, the holistic intelligent SAFE-living solution has been specially designed to minimize the time between a fall and assistance. The intelligent fall detector understands the difference between, for example a yoga exercise, a cat jumping around and a fall event. If a fall event is registered, the corresponding app automatically calls for help. «With our solution we want to provide autonomy, safety and happiness in every home» says CEO and co-founder, Sandro Cilurzo.

### **Financing accelerates the entry into the Swiss B2C market**

The young company closed a oversubscribed seed round of CHF 2.1 million just last August. Only six months later, the pre-series A followed with CHF 3.3 million. Remarkably, 95% of capital comes from existing investors. «The great trust of our investors in Sedimentum encourages us that we are on the right track.» says Sandro Cilurzo. In this short time, Sedimentum has grown up to 14 full-time positions, optimized the SAFE-living solution for the usage in private households, fine-tuned its fall detector to meet the needs of the mass market, and made the SAFE-living app available for iOS- and Android mobile devices. Moreover, the existing pilot projects in institutional facilities have been extended by additional installations in private households. Finally, production capacities have been expanded in order to being able to serve the private customer market. «Corona taught us that it is extremely important to rely on our local partners, which is one of the reasons why we produce in Switzerland.» explains COO and co-founder, Eugenie Nicoud.

We make living safe

## **A unique solution for every home**

The fall detector is installed on the ceiling and operates in a purely contactless and automated manner - nothing to wear (no wearables), nothing to charge, nothing to press and nothing to forget. In the event of a fall incident, caregivers, such as relatives or neighbours are informed instantly and can thus take the necessary measures to protect the fallen person in time. In case all caregivers can't react to an alert, Sedimentum's 24/7 emergency service is automatically contacted - safety around the clock.

The next milestone will be the official B2C market entry in Switzerland. And of course, further expansion is already being planned, as fall incidents are a global societal problem. «We offer the silver age generation the "SaaS" solution they have always been looking for: Safety-as-a-Service.» says Sandro Cilurzo.

## **About Sedimentum**

Sedimentum AG was founded in 2019 and is based in Cham. With its SAFE-living solution, the Swiss HealthTech startup aims to enable people to live safely, autonomously and as long as possible in their own homes. The combination of intelligent and contactless SAFE-living fall detectors and an automatic alert through the corresponding SAFE-living app keeps the time between a fall and the necessary assistance to a minimum and can thus save lives.
